

1. The Solar System

1. Why do scientists use telescopes and satellites?
 - A. To study outer space 
 - B. To clean the moon daily
 - C. To change the planets' paths
 - D. To control the ocean tides
2. What can be inferred about the moon from the passage?
 - A. It produces heat for Earth
 - B. It moves farther every year
 - C. It affects the movement of tides 
 - D. It shines brighter than the sun
3. Which statement best explains the solar system?
 - A. It contains stars only
 - B. It is made of moving clouds
 - C. It includes the sun and planets 
 - D. It covers only Earth and the moon
4. Why is learning about the solar system important?
 - A. It teaches people about planets 
 - B. It explains how rockets are built
 - C. It helps astronauts live on Earth
 - D. It shows how oceans form waves
5. Which detail supports the idea that scientists explore space actively?
 - A. The moon moves around Earth
 - B. Some planets are made of gas
 - C. Astronauts use books about stars
 - D. Scientists send rockets to planets 

2. The Human Body

1. What is the main function of the skeletal system?
 - A. To carry oxygen in blood
 - B. To support and protect organs 
 - C. To break food into nutrients
 - D. To move air through the lungs
2. Why is the circulatory system important?
 - A. It protects bones from damage
 - B. It pumps blood through the body 
 - C. It allows food to enter muscles
 - D. It controls movement during exercise
3. What may happen if students lack proper sleep?
 - A. They may lose concentration 
 - B. They may stop breathing easily
 - C. They may forget how to walk
 - D. They may weaken their bones
4. Which body system helps people breathe air?
 - A. Digestive system
 - B. Skeletal system
 - C. Respiratory system 
 - D. Circulatory system
5. Which idea is emphasized in the passage?
 - A. Healthy habits help the body 
 - B. Exercise is harder than studying
 - C. Muscles are stronger than bones
 - D. Doctors repair every body problem

3. Plants and Photosynthesis

1. What helps plants absorb sunlight?
 - A. Roots inside the soil
 - B. Flowers holding the seeds
 - C. Chlorophyll in the leaves 
 - D. Water stored in the stems
2. Why are plants important to animals?
 - A. They create clean oxygen 
 - B. They produce heavy rainfall
 - C. They protect mountains daily
 - D. They move nutrients underground
3. What is produced during photosynthesis?
 - A. Oxygen and glucose 
 - B. Water and minerals
 - C. Chlorophyll and roots
 - D. Carbon dioxide and soil
4. Which plant part carries water and nutrients?
 - A. Leaves near the flowers
 - B. Stems throughout the plant 
 - C. Roots beneath the ground
 - D. Seeds inside the flower
5. What would most likely happen without plants?
 - A. Animals would grow faster
 - B. Rivers would stop flowing
 - C. Humans would stop building
 - D. Living things could not survive 

4. The Importance of Geometry

1. What does geometry mainly study?
 - A. Plants and living things

B. Numbers used in division

C. Shapes, lines, and angles 

D. Stories from world history

2. Why do architects use geometry?

A. To improve reading skills

B. To create building designs 

C. To measure animal weight

D. To study weather patterns

3. Which tool measures angles correctly?

A. Compass used in science

B. Yardstick used outdoors

C. Calculator used in class

D. Protractor used in geometry 

4. What skill can geometry improve?

A. Logical thinking abilities 

B. Musical performance skills

C. Creative storytelling talent

D. Physical strength and balance

5. Which statement about rectangles is correct?

A. They contain three equal sides

B. They have opposite sides equal 

C. They form circles and curves

D. They include five sharp angles

5. Learning Percentages

1. What does ninety percent mean?

A. Ninety out of one hundred 

B. Ninety added to one hundred

C. Ninety divided by ten groups

- D. Ninety smaller than fifty percent
- 2. Why do stores use percent-off sales?
 - A. To increase school grades
 - B. To compare voting results
 - C. To lower prices on items 
 - D. To solve difficult equations
- 3. Which form can also represent percent?
 - A. A paragraph and table
 - B. A graph and picture
 - C. A fraction or decimal 
 - D. A ruler and symbol
- 4. How are percentages useful in school?
 - A. They explain weather conditions
 - B. They measure classroom furniture
 - C. They describe plant growth daily
 - D. They help students solve problems 
- 5. Which situation most likely uses percentages?
 - A. Measuring a wooden desk
 - B. Finding a test score result 
 - C. Naming planets in the system
 - D. Identifying parts of a flower

6. Vocabulary of Measurement

- 1. What is measurement commonly used for?
 - A. Studying poetry and drama
 - B. Comparing size and distance 
 - C. Learning songs for programs
 - D. Reading stories in libraries
- 2. Which tool is best for longer measurements?

A. Small classroom ruler

B. Short wooden pencil

C. Measuring tape tool 

D. Science notebook paper

3. Why do athletes use measurement?

A. To solve algebra equations

B. To improve reading comprehension

C. To compare physical performance 

D. To identify states of matter

4. Which unit measures shorter distances?

A. Meter and inch 

B. Kilogram and liter

C. Calendar and clock

D. Fraction and percent

5. What can students learn from measurement activities?

A. How to design buildings

B. How to describe feelings

C. How to understand quantities 

D. How to memorize poems quickly

7. Learning Good Study Habits

1. Why should students create study schedules?

A. To decorate school notebooks

B. To manage time wisely 

C. To avoid classroom lessons

D. To shorten homework periods

2. What helps students focus during studying?

A. A quiet environment 

B. A crowded hallway

C. A noisy playground

D. A busy cafeteria

3. Why is proper sleep important for students?

A. It improves handwriting speed

B. It increases classroom noise

C. It prevents losing concentration 

D. It removes difficult assignments

4. Which activity can improve communication skills?

A. Reading books regularly 

B. Skipping grammar exercises

C. Ignoring teacher instructions

D. Avoiding classroom discussions

5. What is the main idea of the passage?

A. Students enjoy different hobbies

B. Good habits support learning success 

C. Teachers assign difficult projects daily

D. Schools require longer study hours

8. Preparing for a School Program

1. What helped make the school program successful?

A. Expensive stage decorations

B. Cooperation among students 

C. Short practice sessions daily

D. Strict classroom punishments

2. Why did students continue rehearsing confidently?

A. They wanted to avoid homework

B. They planned to leave early

C. They hoped to impress visitors

D. They wished to improve performances 

3. What was one group responsible for preparing?
- A. Colorful decorations and materials 
 - B. Science experiments for visitors
 - C. Sports equipment for athletes
 - D. Musical instruments for teachers
4. How did the audience respond after performances?
- A. They remained completely silent
 - B. They asked difficult questions
 - C. They applauded very loudly 
 - D. They left the building early
5. Which trait did students show during preparation?
- A. Laziness during rehearsals
 - B. Responsibility in activities 
 - C. Fear of speaking publicly
 - D. Anger toward classmates

9. The School Library

1. Why do students visit the library?
- A. To practice outdoor games
 - B. To complete schoolwork tasks 
 - C. To prepare food for lunch
 - D. To perform musical programs
2. What does the librarian help students do?
- A. Repair damaged furniture
 - B. Organize classroom schedules
 - C. Find books and information 
 - D. Practice speeches for contests
3. Which material is found in the library?
- A. Cooking ingredients and tools

B. Newspapers and dictionaries 

C. Sports uniforms and medals

D. Paintbrushes and art supplies

4. Why do many students enjoy the library?

A. It offers quiet and knowledge 

B. It provides free classroom grades

C. It allows games during lessons

D. It replaces daily homework tasks

5. What skill can improve through regular reading?

A. Swimming and running speed

B. Singing and dance movements

C. Vocabulary and comprehension 

D. Drawing and painting techniques

10. A Helpful Friend

1. Why did Maria's classmates admire her?

A. She always answered quickly

B. She behaved kindly and respectfully 

C. She finished tasks before others

D. She joined every school contest

2. What did Maria do when her friend forgot a notebook?

A. She shared an extra notebook 

B. She borrowed one from teachers

C. She asked classmates for help

D. She explained the lesson aloud

3. How did the teacher respond to Maria's actions?

A. The teacher ignored her kindness

B. The teacher assigned more homework

C. The teacher praised her attitude 

D. The teacher excused her absence

4. What belief does Maria express in the passage?

A. Teamwork always wins contests

B. Kindness can improve school life 

C. Students should avoid mistakes

D. Friends must study every night

5. Which word best describes Maria?

A. Caring toward other people 

B. Quiet during group activities

C. Nervous before class lessons

D. Competitive in school programs

11. Patterns and Algebra

1. What does a variable represent in algebra?

A. A hidden unknown number 

B. A completed math answer

C. A graph with straight lines

D. A ruler used for measuring

2. Why are patterns important in algebra?

A. They improve drawing abilities

B. They help predict sequences 

C. They explain weather changes

D. They replace scientific tools

3. Which field commonly uses algebra?

A. Literature and poetry

B. Music and painting

C. Business and science 

D. Farming and cooking

4. What does an equal sign show in equations?

- A. Both sides have equal value ✓
 - B. Numbers should change places
 - C. Variables must stay hidden
 - D. Patterns continue forever daily
5. What skill does algebra help students develop?
- A. Strong athletic coordination
 - B. Advanced cooking techniques
 - C. Mathematical reasoning skills ✓
 - D. Artistic design creativity

12. States of Matter

1. Which state of matter has a fixed shape?
- A. Gas inside the air
 - B. Liquid inside bottles
 - C. Vapor during evaporation
 - D. Solid with steady form ✓
2. What happens when ice is heated?
- A. It changes into water ✓
 - B. It spreads into gas
 - C. It becomes a hard rock
 - D. It disappears from matter
3. Why do scientists study matter?
- A. To understand physical changes ✓
 - B. To improve musical performances
 - C. To create fictional stories
 - D. To design school uniforms
4. Which statement correctly describes gases?
- A. They keep a fixed shape
 - B. They spread out freely ✓

C. They remain hard and solid

D. They stay inside the soil

5. What is the main idea of the passage?

A. Matter exists in different forms 

B. Water changes only during winter

C. Solids are heavier than liquids

D. Science explains classroom behavior
